## REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The claimed invention is drawn to the following:

2. (currently amended) A positive-working resist composition comprising;  
(A) at least one basic compound represented by the general formula (3):

(3)

wherein R<sup>2</sup>, R<sup>3</sup> and R<sup>4</sup> are each independently a hydrogen atom, a straight, branched or cyclic alkyl group of 1 to 10 carbon atoms, an aryl group of 6 to 10 carbon atoms, or an aralkyl group of 7 to 10 carbon atoms; R<sup>7</sup> is a straight, branched or cyclic alkylene group of 1 to 10 carbon atoms; and R<sup>8</sup> is a hydrogen atom or an alkyl group of 1 to 15 carbon atoms which may contain at least one group selected from among hydroxyl, carbonyl, ester, ether, sulfide, carbonate, cyano and acetal groups;

(B) an organic solvent;

(C) a base resin having an acid labile group-protected acidic functional group which is alkali-insoluble or substantially alkali-insoluble, but becomes alkali-soluble when the acid labile group is eliminated; and

(D) a photoacid generator.

and

5. (currently amended) A negative-working resist composition comprising:

(A) the basic compound of claim 2 at least one basic compound represented by the general formula (3):

(3)

wherein R<sup>2</sup>, R<sup>3</sup> and R<sup>4</sup> are each independently a hydrogen atom, a straight, branched or cyclic alkyl group of 1 to 10 carbon atoms, an aryl group of 6 to 10 carbon atoms, or an aralkyl group of 7 to 10 carbon atoms; R<sup>7</sup> is a straight, branched or cyclic alkylene group of 1 to 10 carbon atoms; and R<sup>8</sup> is a hydrogen atom or an alkyl group of 1 to 15 carbon atoms which may contain at least one group selected from among hydroxyl, carbonyl, ester, ether, sulfide, carbonate, cyano and acetal groups;

(B) an organic solvent;

(C) a base resin which is alkali-soluble, but becomes substantially alkali-insoluble when crosslinked with a crosslinking agent;

(D) a photoacid generator; and

(E) a crosslinking agent which induces crosslinkage under the action of an acid.

Applicants have amended the claims by including the language to include essential features for a positive and a negative working resist composition. Thus the rejection under 35 U.S.C. 112, first paragraph is overcome. In addition claim 3 has been cancelled to overcome the objection for failing to further limit the subject matter of a previous claim.

Based on the amendment of June 14, 2006, no rejections or objections remain against the claimed positive and negative resist composition comprising the basic compound of formula (1). Accordingly, claims 2, 4 and 5 are seen as allowable and passed to issue.

2. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
